

# Breakout Labs™

Let us help you take your breakthrough out of the lab and into the economy

“Breakout Labs is one of the few groups that’s willing to come in at a very early, risky stage and make an investment to catalyze the life sciences industry.”

— Mara MacDonald,  
Cytovale

We bridge a critical funding gap in the early development of companies at the forefront of innovation. With grants up to \$350,000, we enable early-stage companies to push the boundaries of science, and turn radical ideas into world-changing technologies. Often, we are the first external investors to help entrepreneurs achieve specific value-inflection milestones, such as proof-of-concept, prototype, and animal studies.

We invite proposals in all areas of advanced technologies on a rolling basis, and award grants throughout the year. Our funding decisions are

based on the technology’s potential to impact the future, the right team to develop it, a well-conceived path to commercialization, and overall fit with the diversity of our growing portfolio.

Our companies instantly access a growing network of like-minded entrepreneurs and investors who can help new companies reach their goals. The Breakout Labs program provides key introductions to potential follow-on funders, advice on business plans and presentations, an annual “unboxing” day with potential investors, and access to a vetted set of practical resources.

Breakout Labs receives a small equity stake in and a capped royalty payback from successful companies, then uses the returns to support future innovators.
